comstruct
C-Parts

Tail spend ordering — ultra simple for the foreman, fully controllable for procurement.

60%	75%	85%
of all orders	of suppliers	of all items

C-material ordering platform

comstruct.lovable.app

CONTEXT

The Problem

C-materials are cheap individually — but operationally expensive at scale.

A	B	← GAP WE SOLVE C
A-Materials	**B-Materials**	**C-Materials**
High value	Medium value	Low value per item
Low variety	Moderate variety	Huge variety
Few suppliers	Partially covered	60% of all orders
Already in comstruct		85% of all items

Current reality:

— Phone calls & WhatsApp — zero traceability

— ~5% of spend volume, but 60% of order volume

— Manual Excel tracking — errors & overhead

— Foremen buy at merchant on the way to site

OVERVIEW

Our Solution

End-to-end C-materials procurement — from supplier catalog to site delivery.

01

Catalog Import

CSV & PDF upload

AI column mapping

Auto-categorization

02

Foreman App

Mobile-first

2–3 taps to reorder

Natural language search

03

Approval Engine

Threshold rules

<200 CHF auto-approve

Full audit trail

04

Spend Analytics

Per project & supplier

Budget vs. actual

Trend tracking

05

Catalog Admin

Clean & enrich data

Project pricing

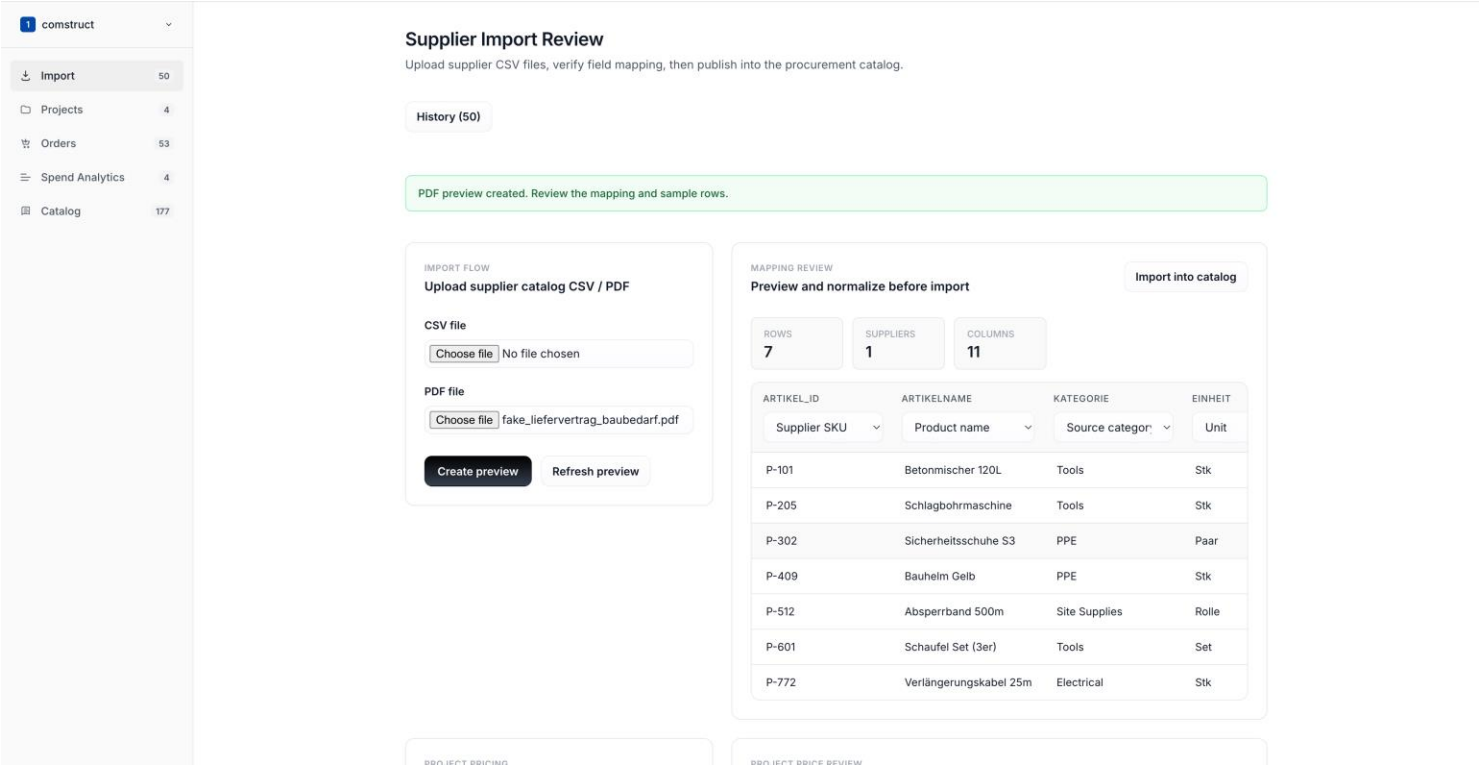
Publication control

supplier → catalog → foreman orders → approval → delivery → analytics

MODULE 01

Catalog Import

Getting messy supplier data into a structured, usable catalog.



MODULE 02

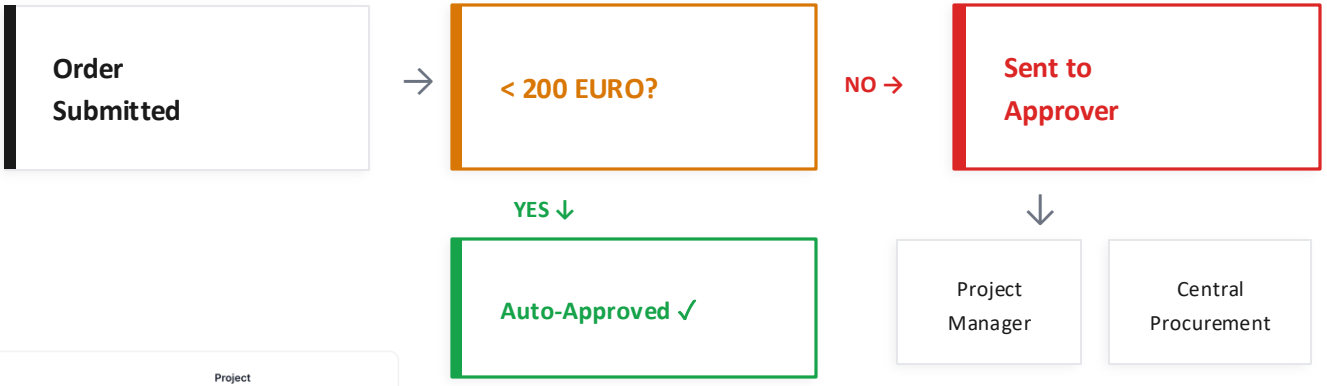
Foreman Mobile App

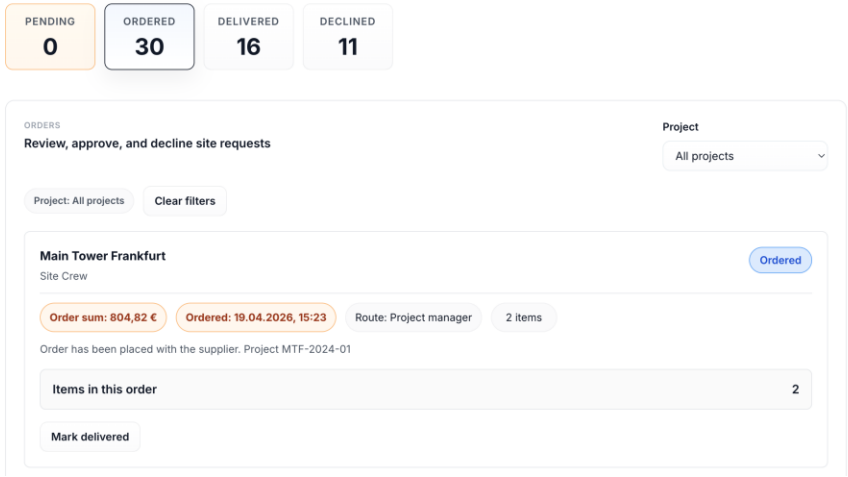
Easier than a phone call. No SKU knowledge needed.

MODULE 03

Procurement Control

Control without micromanagement — the right approvals at the right threshold.

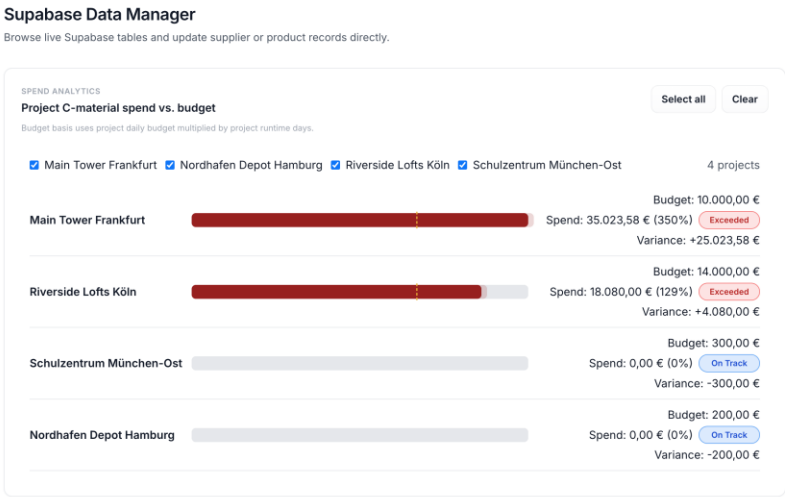


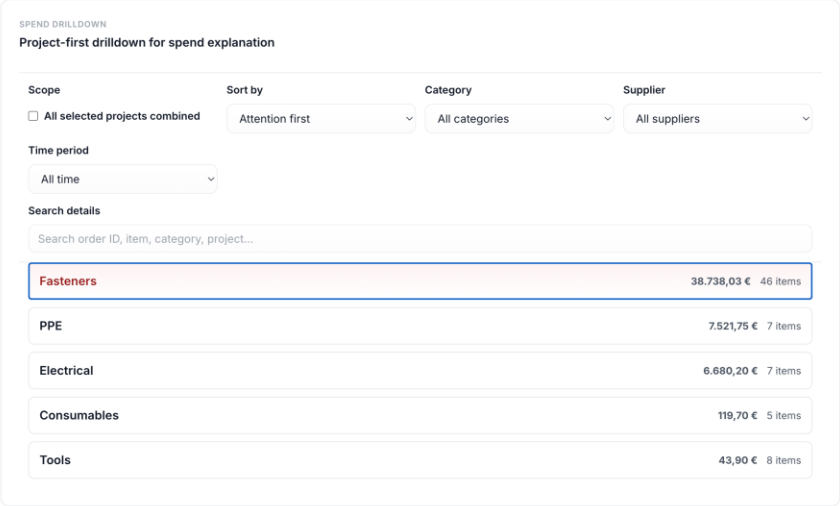


MODULE 04

Spend Analytics

Real-time visibility into C-material tail spend per project, supplier, and category.





STACK

Technical Architecture

Modern stack — Supabase backend · AI-powered import · Mobile-first frontend.

Frontend	Lovable / React · comstruct.lovable.app · Responsive & mobile-first
AI Layer	Claude API · Column mapping · Auto-categorization · Natural language search
Backend	Supabase (Postgres) · Row-level security · Real-time · REST API
Integration	CSV import · PDF parsing · Project-specific pricing · Supplier links

Core tables: products · suppliers · projects · orders · order_items · approvals · spend_analytics

END-TO-END

Demo Scenario

From supplier file to confirmed order — a complete walkthrough.

1	Procurement	**Upload Würth CSV catalog** Map columns → auto-categorize → publish to project
2	Foreman (Klaus)	**Open app on mobile** Search "Torx 4.5×40 for gypsum" → add to cart → submit
3	System	**Evaluate approval rules** Order CHF 68 < CHF 200 threshold → auto-approve
4	Procurement	**Review dashboard** See new order, delivery status, spend vs. budget

Live demo: comstruct.lovable.app · Procurement backend: fully functional

JUDGING CRITERIA

How We Score

User fit — Foreman

Mobile-first, 2–3 taps to reorder. Natural language search. No SKU knowledge required. Large tap targets. Works offline.

★ ★ ★ ★ ★

User fit — Procurement

Configurable approval thresholds. Full order audit trail. Spend analytics vs. budget. Real-time status on every order.

★ ★ ★ ★ ★

Handling complexity

Product kits & bundles. AI-powered categorization. Favorites & recents filter 50k SKUs down to relevant items.

★ ★ ★ ★ ☆

Integration thinking

CSV + PDF import with column mapping. Project-specific contract prices. Supplier SKU normalization model.

★ ★ ★ ★ ☆
